

AUDIO/VIDEO HARD DRIVE

FD800JBOX

BACK

FEATURES

The Jet JukeBox allows users to watch movies, listen to music, or view pictures in flight without leaving their seat to change a disc. The large, internal memory can store all your entertainment, removing the need to carry a bulky library of DVDs and CDs that are prone to being lost or scratched. 500GB of memory is large enough to store 100 full length movies.

- Store Movies, TV Shows, Pictures, and Safety Briefings for easy in-flight use
- Supports the latest high bitrate video formats to provide up to 1080i high-definition videos
- CAN Bus interface to Flight Display Systems Select Cabin Management System
- Easy to use on-screen menus controlled by included remote or on panel of Select CMS allow user to select movies, music, pictures, or slideshow and scroll through list of selections
- Unique slideshow with music for company customer presentations of products, facilities, or passenger information
- Removable from aircraft docking station for loading media in your office or home. Cables and hardware for out of aircraft operation included
- Simple set-up and operation, no software needed
- Connect to PC or MAC
- Several languages available for menus
